DESCRIPTION
BioMag® Goat anti-Rabbit IgG is a suspension of BioMag® particles approximately 1.5µm in size, which are covalently coated with goat anti-Rabbit IgG antibody. The suspension is supplied in phosphate buffered saline (pH 7.4) with EDTA and sodium azide added. After shaking vigorously or vortexing, BioMag® Goat anti-Rabbit IgG is ready to use.

CHARACTERISTICS
Mean Diameter: ~1.5µm
Particle Concentration: 1 mg/mL
Binding Capacity: 1mL (1mg) of BioMag® Goat anti-Rabbit IgG will bind > 0.1mg of rabbit IgG.

PROCEDURE
Researchers are advised to optimize the use of BioMag® in any application as procedures designed by other manufacturers may not be ideal.

BioMag® Goat anti-Rabbit IgG is suitable for use as a secondary antibody in radioimmunoassays and enzyme immunoassays that utilize a rabbit primary antibody. In general, BioMag® Goat anti-Rabbit IgG may be used to quickly and conveniently separate a rabbit antibody or rabbit antibody complex from solution. (For additional information on the use of this product in cell separation, please see Product Data Sheet 528, BioMag® and Cell Sorting.) Separation may be accomplished magnetically or through centrifugation.

STORAGE AND STABILITY
Store at 2-8°C. Freezing, drying, or centrifuging BioMag® may result in irreversible aggregation and loss of binding activity. Centrifugation may be used only if it is the last step in a procedure such that resuspension of the BioMag® is not required.

SAFETY
This particle suspension contains sodium azide. Sodium azide may react with lead and copper plumbing to form explosive metal azides. Upon disposal of material, flush with a large volume of water to prevent azide accumulation. Please consult the Material Safety Data Sheet for more information.

This product is for research use only and is not intended for use in humans or for in vitro diagnostic use.
